

VISTA Software Product Chart:

VISTA Solution Packages				
Configuration Management (Package)	Project Management (Package)	Code Reusability (Package)	Quality Assurance (Package)	GOOP (Package)
Consistently build to meet requirements while maintaining program integrity. Control baselines by easily comparing and tracking file changes.	Create reliable estimates and manage results to ensure success. Accurately track progress with powerful "plan versus actual" metrics.	Increase productivity and quality by optimizing code reuse enabling efficient co-development, and reducing verification time.	Reduce verification and validation time with the ability to track changes, document process and assign and view status of all files. Control the impact of changes through traceability and metrics.	Lower project costs with Object Oriented designs that optimize code reuse, improve scalability, and simplify maintenance.
\$2495.00	Call for Price	\$2095.00	Call for Price	\$1595.00
Software Components				
Configuration Management Base Tools	Project Management Tool	Style Guide	Traceability Tracker	GOOP Inheritance Toolkit
Integrates with third party SCC providers (Visual SourceSafe, Rational ClearCase and more) Quick Access Add, Check Out, Check In, Undo Checkout, Label, Get Version, and more from LabVIEW and TestStand	Record actual time, GOBs, nodes, and other metrics by user, file path, lifecycle, and version Made to order features include: metrics database, report wizard, export of actual results to MS Project	Establish coding standards for higher quality applications Application level security module Reuse Librarian Guidelines to help reuse librarians establish and maintain LabVIEW reuse libraries	This made to order module links multiple MS Word documents, requirements, test plans & components Provides integration with third party SCC providers	Generate classes, methods and objects with the GOOP Wizard 3 Includes the Icon Editor and Development Distribution Tool
Call for Group Pricing	Call for Group Pricing	\$95.00	Call for Price	\$1195.00
Project Management Tool with Baseline Tracker	Metrics Database	Reuse Library	Project Management Tool with Issue Tracker	Icon Editor
Save, restore and modify baselines View baselines by project or directory hierarchy Compare two versions of the same VI	Store information from multiple projects	Approximately 400 general purpose reusable LabVIEW VIs Application level security module Reuse Librarian Guidelines to help reuse librarians establish and maintain LabVIEW reuse libraries	This made to order module assigns and reviews issues more efficiently	Makes icon generation and maintenance fast and easy Define icon style once, and then apply to all icons automatically Handles everything from single VIs to large structures of VIs
\$1,795.00	Call for Group Pricing	\$495.00	Call for Price	\$295.00
Deployment Engine	Metrics Report Wizard	VI Documentation Manager	Project Management Tool with Complexity Tracker	Development Distribution Tool
Creates executables with .EXE build Deploy source code with Native Build Rename files on deployment machines with unique prefixes to avoid name conflicts	Create custom organizational performance reports View standard productivity and project status reports	Edit VI descriptions, controls, and indicators Improves productivity when documenting VIs and inspecting many project VIs Lists and selects VIs from a project or directory structure	This made to order module calculates cyclomatic complexity of modules and projects and documents areas of concern	Distribute LabVIEW code easily in a professional package Minimize risk of accidental crosslinking Run distributions of different versions at the same time The included support tool, Create Build Script, creates a build script (.bld file) to use with the LabVIEW Build Application Tool (for building .exe files)
\$695.00	Call for Group Pricing	\$395.00	Call for Price	\$295.00
Integrity Tracker	Import/Export Wizard for MS Project	VI Documentation Generator	Project Management Tool with Path Tracker	GOOP Course Materials
Ensure systems operate in correct configurations Perform run time integrity check of the installed package components with time stamp and checksum comparisons	Compare planned estimates to actual results	Search VI information by keyword Generate searchable HTML project reference manuals Promotes ease of finding and reusing code	This made to order module detects path coverage and views areas of concern	Learn Object Oriented analysis and design Apply concepts and implement Object Oriented systems in LabVIEW
\$295.00		\$495.00	Call for Price	\$395.00
		Renaming Tool		
		Automatically rename and relink libraries and projects Create multiple versions of LabVIEW applications on a single system without the risk of VI name conflicts		
		\$195.00		
		Advanced Application Development Course Manual		
		Maximize code reuse Apply standard coding conventions		
		Icon Editor		
		Makes icon generation and maintenance fast and easy Define icon style once, and then apply to all icons automatically		
		\$295.00
